

# Nature and Benefits of Conducting a Literature Review

## **What is a Literature Review?**

Doing a literature review is not merely compiling different studies on our E-activity research but filtering essential details from various sources that may add @ Peer-graded colors to the research. Thus, this Assignment: E-activity Grading in progress involves a systematic review of the documents that have been gathered.

## **Review our Peers**

The researcher should scan shreds of activity 2 evidence that could be a big help in making a decision-evaluating the reliability of the information and understanding how the idea was presented in the paper.

## **Why Do We Need to Do One Literature Review?**

From these available resources, the researcher should be able to synthesize the gaps in the study, their similarities, differences, and the effectiveness of the intervention. It is like stitching the different parts of a dress. Furthermore, the researcher should create a smooth storyline among the other evidence without neglecting the conflict of each study. I believe those are some of my takeaways from this lesson.
